

Below table shows some other features comparison between WCC and Drupal.

Feature	Drupal	WebCenter Content
Pricing	Free Version	Starts from \$3450
Best For	Drupal's open-source community is made of developers, designers, trainers, strategists, editors, and more.	Enterprise content management solution that features content publishing, document management, records management, capturing and imaging for medium and large businesses. Integration to the Enterprise applications. In-built adaptors.
Top Features	<p>Audio File Management</p> <p>Collaboration Tools</p> <p>Content Publishing Tools</p> <p>Document Management</p> <p>Electronic Forms</p> <p>Text Editing</p> <p>Video Support</p> <p>Website Management</p>	<p>In addition to what Drupal can offer, we offer ...</p> <p>Document Management support more formats and</p> <p>Records and Retention Management</p> <p>Digital Asset Management</p> <p>Workflow Management</p> <p>Electronic Forms</p> <p>Search Capabilities – Metadata, Full Text, and Elastic Search</p> <p>Enterprise Applications Integration (i.e Siebel, E-Business Suite, etc.)</p> <p>Out of the Box Integration SOAP Services (Upload, Edit, Search documents)</p> <p>RIDC API</p> <p>WebCenter Forms Recognition with the OCR capabilities</p> <p>WebCenter Capture to automate the documents upload from various sources such as E-mail, Scanner, Network Shared Folders, etc.</p>
Pros	<p>The flexibility this provides to continue growing a web site makes it priceless. The community around the project is amazing and has provided excellent modules to get a site up and running easily.</p> <p>It was easy to use, great community (in the past) and amazing features and flexibility.</p> <p>☐ That said, with the right help - you can pretty much do anything online with Drupal. There is also an amazing community to access who will do what they can to help.</p>	<p>Ability to integrate with your Mobile Phone (Android, iPhone), that you don't need and external IDE to develop, it's everything you need in the web console and the configuration applets you use to customize.</p> <p>WebCenter in conjunction with Fusion Payables for invoice processing. Though WebCenter content has many uses and features.</p> <p>WebCenter can act as a centralized content depository. Digitizing unstructured data in WebCenter can save loads of money.</p>

	<p>☑ This is possible because of its great (in terms of quality and size) community and contributed modules. Some features I like the most of Drupal.</p>	<p>Retrieval of documents, when needed will be far easier in case of digitized versions when compared to physical paper documents. Further many companies lose valuable office space to store paper documents in file cabinets.</p> <p>All this office space can be saved if documents are digitized in WebCenter. After initial storage, these digitized documents can be version controlled, annotated, checked in and out.</p> <p>Workflow is built into the system.</p> <p>Documents can be routed to users. Automated notifications and escalations are possible. Approvals can be reassigned and delegated.</p> <p>The optical character Recognition feature is a learning-based solution. A few document examples enable processing of many different documents. The WebCenter will automatically match the invoices to the Purchase orders. This will save lot of manual effort.</p>
Cons	<p>The product is difficult to use with limited coding knowledge.</p> <p>Naming conventions concerning views, nodes, taxonomy, menu items, panels, modules and tokens can be confusing and particularly overwhelming to a beginner.</p> <p>It always has to be a developer. This is a bit frustrating when something goes wrong with the setup.</p> <p>In addition, the APIs underneath the hood of Drupal often make it quite a long process developing with Drupal. There are a lot of quirks to learn about before you can really get stuck in.</p>	<p>Since it still use applets to some settings, sometimes you get compatibility issues when you try to open in certain browser with different java versions.</p> <p>The optical character recognition software is a learning-based solution, which means it need to be trained for different invoice styles.</p>
